

What are the different Global Fishing Watch Products?

Global Fishing Watch has a portfolio of free products including: 1) Map; 2) Marine Manager Portal; 3) Carrier Vessel Portal; 4) Private partner workspaces; 5) Data download portal. We are constantly working to make our data more accessible through different functionality and formats to enable informed decision-making and unlock new possibilities.

Pioneering technology reveals human activity at sea

Map

Designed so both experts and non-experts can see and assess fishing activity, and track individual vessels over time.

Marine Manager Portal

Ocean conditions, biology, and human-use activity to support marine spatial planning, marine protected area design and management, and scientific research.

Carrier Vessel Portal

Explore carrier vessel activity; pinpoints encounters between vessels, collates fishing authorizations and identifies frequently visited ports.

Data Download Portal

Download published datasets and code to explore fishing activity, encounters, and other types of data.

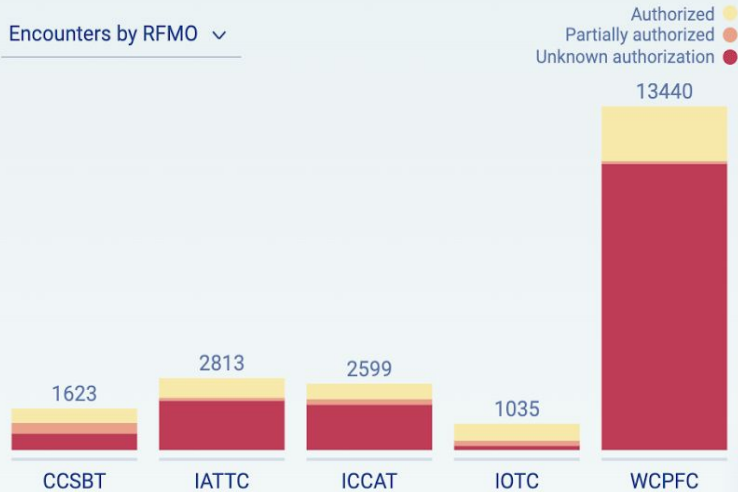

ENCOUNTERS

LOITERING

Between Jan 1st 2017 and Mar 31st 2020, 508 carriers from 33 flag states had 19495 encounters in WCPFC, IATTC, ICCAT, IOTC, CCSBT and CCSBT.

Miller et al. (2018). Identifying Global Patterns of Transshipment Behavior

Transshipment data from the 2018

Anonymized AIS training data

Anonymized AIS data with labeled fishing positions suitable for training machine learning solutions.

Anchorage

Global database of anchorages where vessels congregate

Data Download Portal

Upcoming Tools and Technologies

New Map

Next generation of the Global Fishing Watch Map

Launch July 15

Port Inspection

Support PSMA process through mobile application to aid the investigation of foreign vessels visiting a given port

Pilot in Fall 2021

APIs

Providing additional ways to access GFW data directly into your own tools

Pilot in Winter 2021

New Data Layers

Release global dark vessel layer from sentinel-1 imagery archive and AIS disabling events

Winter 2021

¿Qué es el Mapa de Global Fishing Watch?

Empleando tecnología de punta, nuestro revolucionario mapa en línea rastrea los movimientos de las **embarcaciones pesqueras comerciales en todo el mundo**. Cualquier persona que tenga una conexión a internet puede utilizarlo **gratuitamente** para rastrear estas embarcaciones y descargar datos sobre sus actividades en el pasado y presente, lo que brinda oportunidades inéditas para mejorar la manera en que se gestiona la pesca.

Una tecnología pionera en el mundo que revela la actividad humana en el mar

Información Histórica

Varios años de información en todos los datos: Esfuerzo pesquero, encuentros, detección de embarcaciones a través de datos de imágenes nocturnas, otros tipos de eventos de embarcaciones e identidad de las mismas.

Datos casi en tiempo real

Datos publicados con 72 horas de demora y acceso histórico al trayecto de las embarcaciones y actividad pesquera desde 1 Enero 2012

Fácil de usar

Diseñada para que tanto los expertos como los no expertos puedan ver y evaluar, la actividad pesquera y analizar las trayectorias de embarcaciones individuales a lo largo del tiempo.

Accessible y gratis

Disponible gratuitamente para cualquier persona con conexión a Internet; de fácil acceso y uso, desarrollado para funcionar en equipos de nivel medio y con un bajo consumo de datos.

Global Fishing Watch

Para evitar colisiones,
algunas embarcaciones
transmiten su posición

Una constelación de
satélites y receptores
terrestres recopila
esas transmisiones

Una vez procesados
y comprobados los
datos, los ponemos
gratuitamente en el
Mapa

Cómo funciona el mapeo de la actividad pesquera

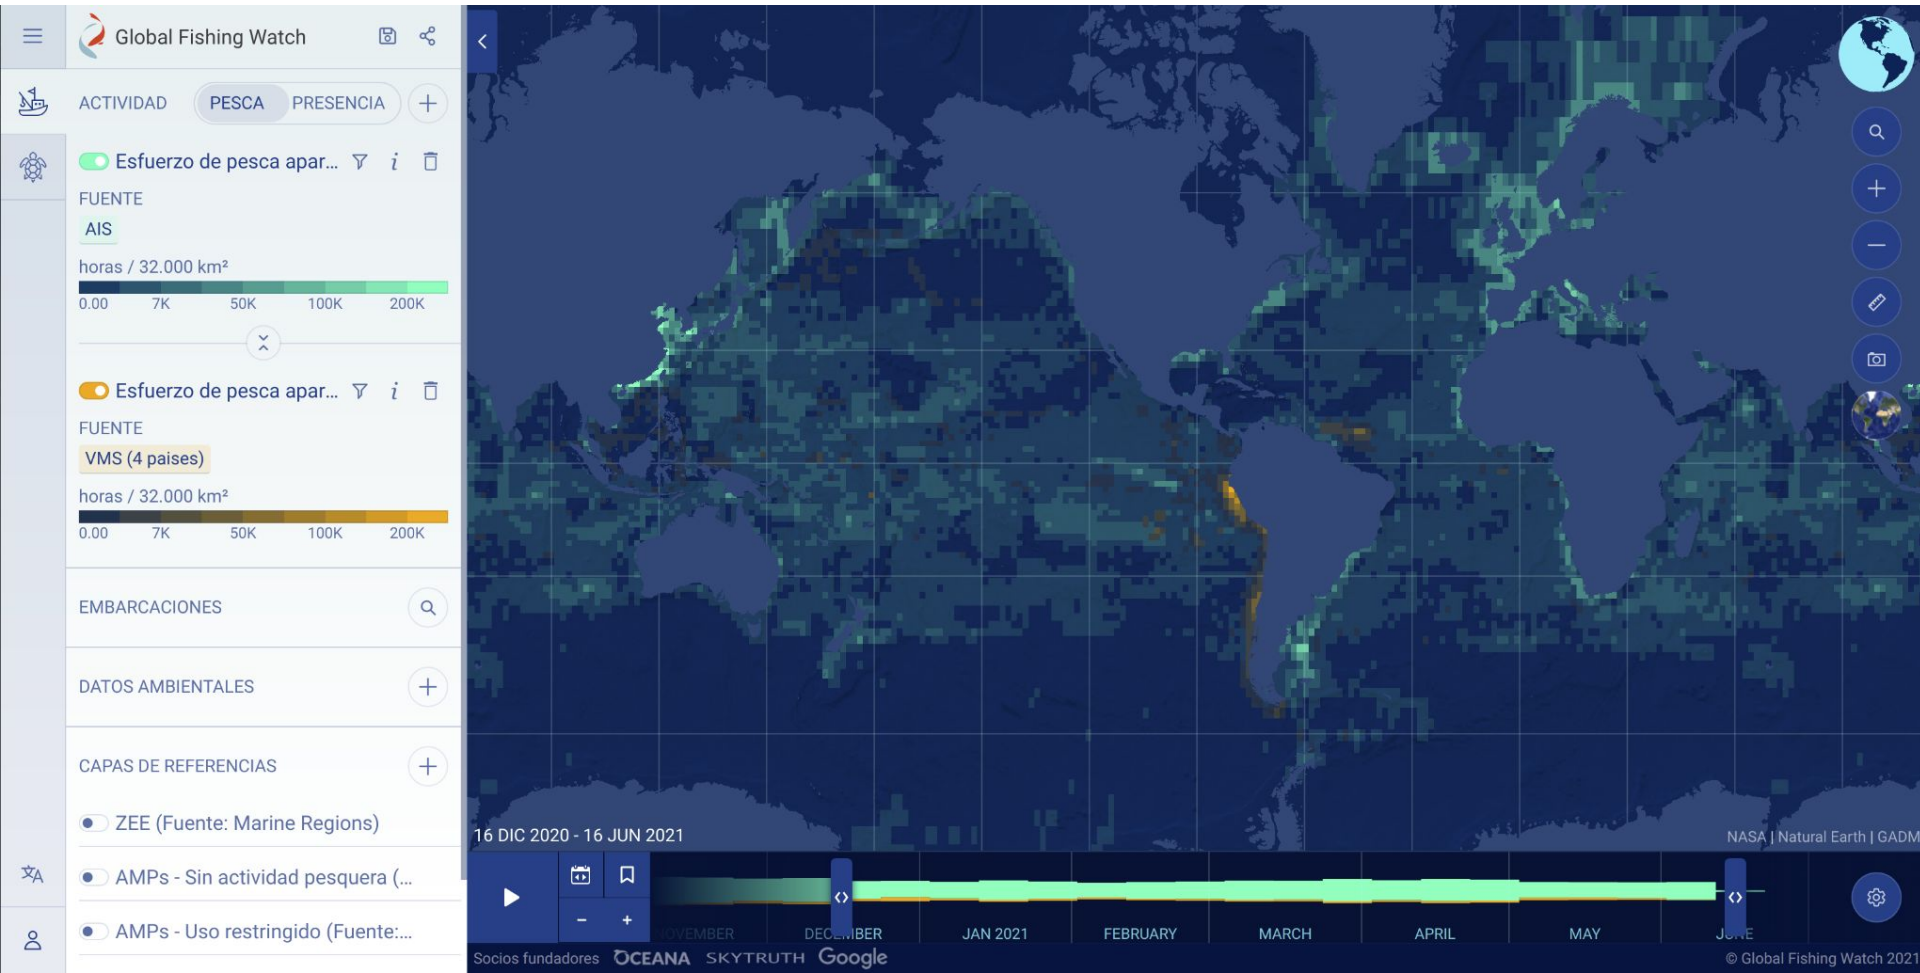

La plataforma aplica
algoritmos de aprendizaje
automático a los datos para
determinar qué barcos son
embarcaciones pesqueras,
el tipo de artes de pesca que
utilizan, etc.

Combinamos estas
transmisiones con
otras fuentes de
datos

Mapa 3.0

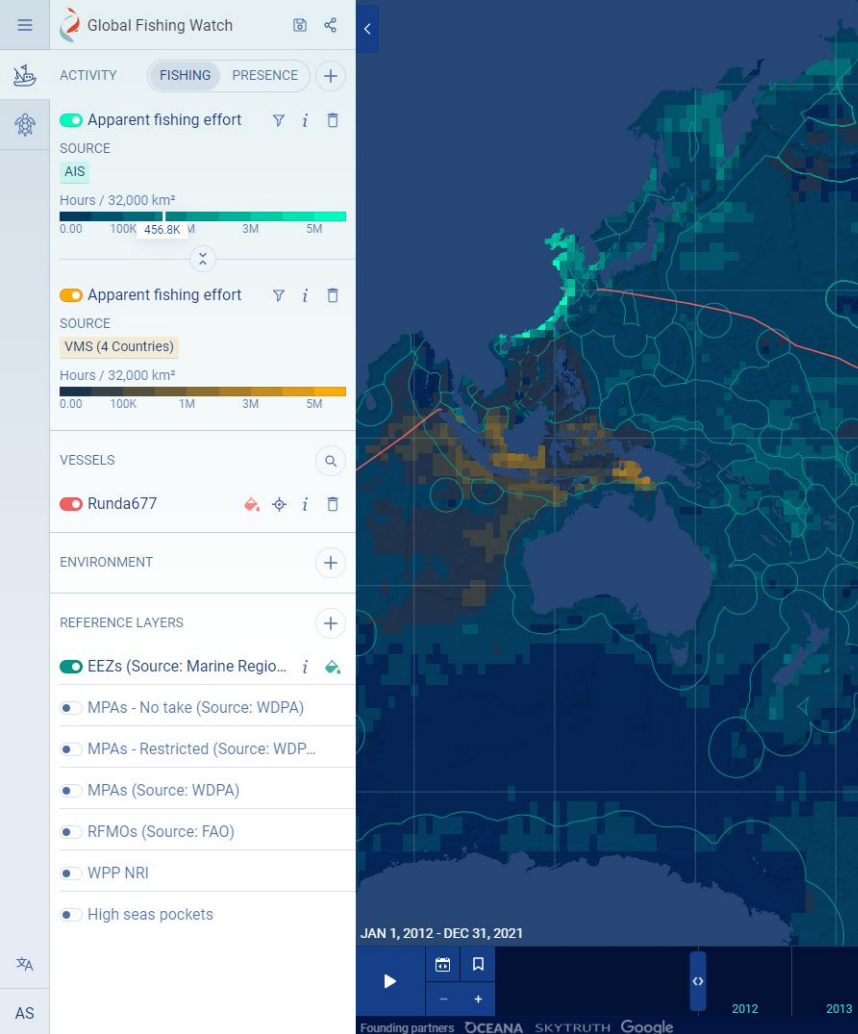

Mapa 3.0

¿A quién está enfocado?

- Gobiernos
- Investigadores
- ONGs
- Diferentes actores de la cadena comercialización de alimentos del mar
- Pescadores

Mapa 3.0

¿Qué puede hacer?

- Visualización dinámica
 - Actividad Pesquera
 - Presencia
- Búsqueda y análisis de una embarcación
- Análisis de una región sobre la marcha
- Descargar informe
- Explorar áreas personalizadas

Thank you / Gracias/ Obrigada

Global Fishing Watch is an international nonprofit organization dedicated to advancing ocean governance through increased transparency of human activity at sea. By creating and publicly sharing map visualizations, data and analysis tools, we aim to enable scientific research and transform the way our ocean is managed. We believe human activity at sea should be public knowledge in order to safeguard the global ocean for the common good of all.
